DETAILED ACTION

Allowable Subject Matter

1. Claims 1, 6-12, 15-18, 23, 25-26, 30, 33, and 37 are allowed. The following is an examiner's statement of reasons for allowance:

Angeopoulos et al (U. S. Patent: 6316167), teaches, a method for depositing a material on a substrate, comprises, Placing a substrate in a chamber having a plasma source and on a substrate holder [column 9 line 65], depositing the ARC layer on the substrate (bottom layer), Angeopoulos teaches the film is R:C:O:X where the R: is silicon and X is not present (abstract lines 4-8)[column 9 lines 65-67], for example SiOC or SiON wherein the precursor is provided to the chamber [Colum 10 lies 4-10]. Angeopoulos teaches preventing the formation of a photoresist foot (poisoning) during a subsequent

lithographic operation, by deposition a layer of RCHX film on the surface of the TERA layer[*top layer*][column 10 lines 45-65]. Angeopoulos also teaches depositing the top layer can be done in two steps of depositing one layer and second layer, the second layer is considered as modifying a top surface of the top later portion of the deposited TERA layer by exposing the top layer portion of the deposited TERA layer to a post processing plasma during the establishing step [as required by claim 1 in page 2 last paragraph][column 12 lines 36-66]. Angeopoulos also teaches the RCHX films obtain by vapor deposition process [column 13 lines 11-13, and claim 2], and further teaches the vapor deposition is assisted with high density plasma [claim 4]. It is also inherent that for depositing the RCHX film (containing hydrogen), a hydrogen containing gas has to be employed.

2. Sang-Yun Lee et al, Journal of Electrochemical Society, 150(1) G58-G61(2003), teaches a method of making pattern on an TERA(ARC) layer by lithography and Lee further teaches to deposit SiOC or SiON as an ARC layer [page G58, 4th paragraph]. Lee teaches the process gas comprises silicon containing and carbon containing precursor with flow rate of 200-500 sccm [3MS, page G58, paragraph 5 lines 4-6]. Lee teaches combining 3MS with He gas also [page 58 second column last 4 lines]. Lee teaches the chamber pressure of plasma processing chamber is 4 Torr[fig. 1].

3. Hartmut Ruelke et al (U. S. Patent: 6927161) teaches a method of depositing a low k dielectric layer with 3MS precursor where the chamber pressure is 4-6 Torr[column 6 lines 59-63], and teaches pumping(evacuating) and purging the chamber after process[column 9 lines 18-23].

Art Unit: 1792

4. Lei Zhang (U. S. Patent: 6869750), teaches plasma deposition method where the showerhead has different lay out in the center and in the edge.

5. Although the said references teach the claim limitation partially, the references do not fairly teach or suggest the particular combination of plasma processing steps, particularly not the specific combination of gas flow rates, pressures, and RF source powers for each particular step

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
